

High Performing and Environmentally Preferable

The Environmental Sustainability of 3M™ Floor Pads

For over 50 years, 3M™ has incorporated the concept of sustainability into the design of floor pads that are washable and reusable, helping to postpone landfill disposal. 3M™ Floor Pads remove black marks up to six times faster, which can lead to less energy usage from burnishing equipment and the added social benefit of reduced labor. Plus, 3M™ Floor Pads increase soil removal up to 60% and can last up to 25 times longer than other brands to help postpone landfill disposal.

3M™ Nomad™ Entrance Matting System

The 3M™ Nomad™ Entrance Matting System is not just a mat. It's a complete system. Each mat in the system does a specific job. 3M™ Nomad™ Scraper Matting (vinyl loop) traps dirt before it gets in the building. 3M™ Nomad™ Carpet Matting, designed for indoor use, captures moisture and dirt particles not removed by outdoor matting.

Different mats for specific jobs

3M™ Scraper Matting

- Removes up to 72% more dirt than other types of entrance matting
- Resilient vinyl loops scrape dirt and moisture off shoes
- Coiled loop construction effectively traps and hides dirt
- Dirt and water can easily be removed by shaking, vacuuming or rinsing

3M™ Carpet Matting

- Patented Dual-fiber design:
 - Coarse polypropylene fibers scrape, remove and hide small soil particles
 - Fine looped nylon or polypropylene fibers wick away water
- Specially crimped fibers help keep the mat from crushing and trap dirt and water
- Remove dirt and water as you would for any carpet—through vacuuming and periodic extraction

3M

- Coiled vinyl loops scrape, trap and hide dirt and moisture from shoes; minimizes tracking debris into building
- Easy-to-clean crush-resistant vinyl; just hose or shake clean

Studies have shown that 2.5-6 times more dirt and soil is removed by 3M™ Dirt Stop™ and Nomad™ Scraper Matting than competitive matting. Less dirt and soil tracked into facilities means reduced time, effort and energy required to keep floors clean. Fewer cleaning chemicals are required to maintain floors, which translate to fewer chemicals entering the environment, fewer volatile organic compounds (VOCs) and other indoor contaminants being released inside a facility, helping to improve indoor air quality.

A. 3M™ Dirt Stop™

Handles light foot traffic—up to 50,000 people per year. Vinyl backing retains debris; prevents water seepage. Manufacturer's limited one-year warranty.

Entryway mats are a great option because they stop dirt that would otherwise have to be cleaned up all over the building.

Consider that 80-90% of dirt inside a building comes in on people's feet. Mats can increase the life of floor finishes and reduce the need for polishing or burnishing. Mats can extend the life of carpeting and reduce the need for wet cleaning. Rubber mats are a greener, more natural choice than vinyl.

3M™ NOMAD™ ENTRANCE MATS

- Dual-fiber construction for exceptional dirt and water removal
- Fibers resist staining and fading; mats look new longer
- Slip-resistant vinyl backing will not stain floor

Large, crush-resistant polypropylene fibers scrape off loose dirt not removed by outdoor scraper matting; tough, looped nylon fibers wick away water. Pattern designs hide unsightly soil between cleanings. Vacuum or use extraction method to clean. Studies have shown that 2.5-6 times more dirt and soil is removed by 3M™ Nomad™ Scraper Matting than competitive matting. Less dirt and soil tracked into facilities means reduced time, effort and energy required to keep floors clean. Fewer cleaning chemicals are required to maintain floors, which translate to fewer chemicals entering the environment, fewer volatile organic compounds (VOCs) and other indoor contaminants being released inside a facility, helping to improve indoor air quality.

More Tips To Consider Before You Buy:

POWER CORD:

Cordless varieties or models with extra long cords will allow you to move freely from room to room without having to unplug and switch power sources. Quick cord releases make getting started and storing your vacuum away when finished easier.

CLEANING PATH:

Vacuums with wider cleaning paths will save time and increase productivity while cleaning.

VACUUM PERFORMANCE:

Two important ways to measure vacuum performance are airflow (CFM) and lift (inches).

FILTERS:

For optimal vacuum operation, check your filters frequently. For allergen-sensitive areas like hospitals, schools or doctor's offices, HEPA filtration systems are highly recommended.

BAG REPLACEMENT:

As the bag fills, less air flows out and the cleaning performance of your vacuum reduces. It is very important to replace or empty bags when they are full.

ATTACHMENTS:

You can find a variety of tools and accessories for your vacuum. Be sure to select compatible tools, filters and accessories that address your specific needs best.

A Key to Good Health Lies Beneath Your Feet

Like most people, you probably spend approximately 90% of your time indoors. Since interior environments are where we spend most of our time, the quality of the air available inside our work and living spaces is going to be a factor in our health.

In the past we didn't think much about interior air quality. We were more focused on visible cleanliness, shine and fresh smell. Now we realize that many of the materials and products we used contained solvents and other chemicals that might have persisted in the air, lowering its quality.

The materials used in flooring and carpeting as well as the products and equipment used to clean them, are important air-quality choices you make every day in the work you do. Here are some things you may want to keep in mind when making these choices.

- The CRI (Carpet and Rug Institute) Seal of Approval program identifies effective carpet cleaning solutions and equipment that clean carpet right the first time and protect a facility's carpet investment. Not all products clean well enough to earn the Seal of Approval distinction, so look for the blue and green CRI Seal of Approval as proof that you are purchasing or using a quality product.
- Keep in mind that carpeting and other flooring may continue to release volatile gases and toxins into the interior air for weeks or months after installation. Look for the CRI Green Label™ logo on carpeting, padding and the adhesives used to install carpeting. This indicates that the products have been tested using scientific standards developed with the Environmental Protection Agency (EPA) to help reduce their impact on air quality.
- The use of recycled materials in flooring products will reduce the quantity of material that end up in landfills.
- When cleaning carpeting and flooring, look for "green" cleaning products to reduce the amount of harmful substances put into the air. You will find that many "green" cleaners work as effectively as other cleaning products and they are a healthier alternative.

CRI Seal of Approval—The CRI (Carpet and Rug Institute) Seal of Approval program identifies effective carpet cleaning solutions and equipment that clean carpet right the first time and protect a facility's carpet investment. Not all products clean well enough to earn the Seal of Approval distinction, so look for the blue and green CRI Seal of Approval as proof that you are purchasing or using a quality product.

The CRI Seal of Approval logo is a trademark of the Carpet & Rug Institute.

Arm & Hammer™ Odor Elimination—Sanitaire® with Arm & Hammer™ introduces a new line of vacuum bags that eliminate odors caused by mold, bacteria and fungi while capturing fine allergen size dust particles—a combination ideal for the commercial cleaning industry. Three Factors to Consider for Cost-Effective Cleaning with Vacuums

1. Efficient Cleaning Service Productivity:

- Multi-Purpose Vacuums—provide a cleaning solution by combining multiple cleaning steps into one, eliminating non-productive time which can help to reduce payroll costs!
- Automatic Height Adjustment—choose an Automatic Height Adjustment Upright if your cleaning environment includes many different carpet heights. This feature helps eliminate guesswork by automatically adjusting the power head of the vacuum to the carpet height.
- Indicator Lights—incorporated into the base control panel shows when the power head is moving.
- Vacuums with Tool Accessories—accommodate multi-purpose use such as different types of flooring surfaces and upholstery cleaning.
- Intelligent Indicators—easily indicates a full bag, dirty filter and brush jams.
- Wide Cleaning Path—quickly cleans large, minimally-furnished rooms.

2. Green Cleaning:

- Designed to reduce the impact of cleaning products on the environment along with increasing occupant and worker health.
- To meet the increasing demand and new standards for a “greener” environment, vacuum-cleaner manufacturers continue to improve their models to meet stringent outside testing for air filtration, optimum pick-up of soil and dust retention.
- Backpack vacuums with closed bag systems and multi-stage filtration (multiple layers of filter material to remove particles of soil) also feature quiet operation.
- HEPA or Hypoallergenic filtration provide a high standard of dust removal and retention, a priority for people with allergies.
- Hospital environments, where indoor air quality (IAQ) is crucial to staff and patient well-being, benefit from using a vacuum with HEPA filtration.

3. Day Cleaning:

- Cleaning Service Contractors have seen a strong demand for cleaning during the day. This trend is driven by the rising cost of energy.
- Day cleaning can reduce utility expenses (between 25-30%) and can contribute to employee retention.
- Day cleaning encourages communication among facility staff and occupants and improves security.
- Look for vacuum cleaners with quiet operation and a 1-pass cleaning solution for multi-purpose use, which will minimize office disruptions.
